[] Comment:

a. On the whole, the statements about the Elektrik electro-technic plant are considered credible; the location, however, does not seem quite accurate.

b. According to Mil. Geo. Plan of Leningrad, position (1) shown on the sketch is that of the Max Goltz Machine Factory, producing printing machines, concrete mixers, etc.; and position (3) indicating the location of Section 3 of the plant is that of a motorcar repair shop. Aerial views show that, late in 1942, the building shown as Section (Part) 2 did not exist.

The Elektrik Plant is located north of the position shown on the sketch, but not on Pesochaya Street. During the war, the plant was producing electric welding machines and electric accessories for airplanes.

The electrotechnical plant Leninskaya Iskra is located on Pesochaya Street, west of Pirov Street. It produced aircraft storage batteries during the war.

c. The positions of the two plants Elektrik and Leninskaya Iskra, as well as the reported position of the plant Elektrik, have been shown in Annex 2.

d. In the case of the radio device which has been compared with the ex-German Frankfurt Gear, it is the question of a ground radio measuring device similar to the AA fire control equipment.

2 Annexes: 1.) Plant for Signal Gear and Research
2.) Institute in Leningrad.
